CHARMS OF YESTERDAY.
 (Baltimore American.)
 It is not far to yesterday,
 And there we turn our eyes
 To where the good, glad memories
 In pleasing pictures rise.
 The faded roses of today
 Grow red and rich with dew
 And where grey clouds are spread
 We see the skies of blue.
 Just down the way is yesterday;
 There sunshine always beams;
 Today we close our eyes and see
 Our yesterday in dreams;
 Today we hear the long dead song,
 And now we understand
 Its cadence and know why it made
 Our yesterday all grand.
 A little way to yesterday;
 Today may have its tears,
 Yet yesterday is filled with smiles,
 Tomorrow has its tears.
 Today—tomorrow—what of them
 When we can find the way
 That leads us to the golden land,
 The land of Yesterday!
 It is not far to yesterday,
 With glamour of the rose,
 With haunting echo of the song
 That thrilled us to the close.
 Tomorrow and today will lose
 Their darkness and their gloom,
 And each will soon be yesterday,
 With melody and bloom.

over a very large wheel. From here we went to the filing room where the saws are prepared for use. Here stood filer Mewery watching an emery wheel that was running at lightning speed while streams of fire rolled from the teeth of the saw. I stood and looked a few minutes then asked my conductor where the filer was. He said, "That is him." I went and called that a grinder instead. Coming down from this room we stopped by the man who was turning down from the saw (called off-bearer on most mills.) He stood there pulling some little ropes and like the Irishman, the machinery did all the work. He separates the slabs from the lumber, sending the slabs to the slasher and the lumber to be edged to the edger. Here stood B. F. Conrad cutting off all bad edges. The machine used is the best made. Mr. Hibbert, the man at the turning table, sends the clean lumber to the trimmer, operated by John Lantz. Here the lumber is separated and the ends squared. This is done by the use of ten saws set by levers. On the man who run the edger and the trimmer depends the value of a grade of lumber, for by their cutting the different grades are often made. The next man we met was Newcome, the scaler. He works a box by the chains that cut lumber across the building makes a note of all the lumber it moves. From here we went to the
